

## ABOUT US...

Composite Envisions specialize in the composite industry with our main focus on producing high quality, low cost, carbon fiber panels for the end consumer. We use a variety of advanced materials and have been working with these materials for years.

Carbon fiber and composites in general are quite expensive to produce, but we have found new ways to manufacture these panels, which in turn lets us pass on the savings to the consumer.

We are in the process of opening our mold-making division, where we will be able to reproduce any item out of carbon fiber or fiberglass. We will specialize in creating auto parts, i.e. fenders, door skins, trunk lids and hoods, however we are open to custom work. Check back with us in the near future for more updates.

## WE TURN YOUR IDEAS INTO A REALITY

Composite Envision works with consumers creates parts range from **overlaying carbon fiber** to existing parts, **custom cad work** with waterjet cutting, and **creating molds** with complete part reproduction out of **carbon fiber or fiberglass**.

# GROW WITH US

*At Composite Envisions we offer a wide range of solutions to help your need.*
